Key Topics

1 The Husqvarna Group

The Husqvarna Group is a global leading producer of outdoor power products for forest, park and garden care and also cutting equipment and diamond tools for the construction and stone industries.

Environmental care is a Husqvarna business value rooted in our passion for innovation and connecting people with nature. By living our values we will raise the bar on environmental care and product efficiency and find new ways to reduce consumption of energy, water and other resources. More importantly, this is how we will explore innovative product ideas and business models that will deliver positive impacts on people and the planet, and how we intend to make these technologies available to many more people in the future and at the same time reducing the Husqvarna Group's environmental footprint.

The Husqvarna Group believes in a proactive environmental work with preventive actions and takes an active approach regarding environmental legislation affecting our business. Compliance with applicable laws and regulations is only a minimum requirement and environmental care shall be integrated in all of our operations and be continuously improved by formulating, communicating and monitoring clearly defined targets engaging all of our employees.

2 Design for environment and a clean production chain

The Husqvarna Group shall develop future-oriented products with reduced environmental impact and improved environmental performance throughout the product's life cycle, including procurement, manufacturing, distribution, use and disposal. We strongly believe that high environmental performance goes hand in hand with product quality, performance and safety.

Product innovation and environmental improvements shall be driven by market expectations, our customers' requirements, legal obligations and best practice and we always strive to exceed the expectations. Minimizing pollution is a prerequisite for all operations including waste minimization, substitution of hazardous substances and reduction of emissions into land, air and water, as well as noise.

3 Resource conservation and efficient transportation

The Husqvarna Group shall optimize the use of energy and limit the exploitation of resources such as land, water, material and chemicals including reusing and recycling where applicable.

We will also select energy providers with due consideration to their environmental impact. We will prioritize use of transportation with less environmental impact, from purchasing to distribution, including load optimization.
